

[samurai GOLD] is a photosynthetic bacteria (*Rhodospseudomonas palustris*) based microbial liquid fertilizer developed in Japan and very popular around Asia. It is effective on suppressing plant failure.

More about [samurai GOLD]

[samurai Gold] helps to increase the amount of the photosynthetic bacteria in the soil. It prevents plant failure and promotes continuous and efficient planting. The fertilizer is composed of alive Rhodospseudomonas palustris that belongs to Rhodospseudomonas genus. These are very useful and effective microorganisms for making compost from the animal waste as it provides a quick breakdown of the organic compounds. Odorless and easy to store. Can be used for any plant.

About [Photosynthetic bacteria]

These bacteria obtain energy from light and can easily be found in the nature. As being non toxic and unharmed they are very effective on increasing and regulating total number of beneficial microorganisms of soil. As soil is a living medium due to microorganisms inside nutrition efficiency is directly related to healthy microorganisms.

[Recommended Dosage and Application]

Dilute 1 liter of fertilizer with 500 ~ 1000 liters of water. It is recommended to use 3-4 times by irrigation before and during the season depending on the soil structure.

It can be applied by spraying over plant leaves or soil directly. Combination with organic fertilizer or compost is more effective.

Vegetables : Prevents replant failure, improves the quality of the products.

Fruits : Helps to grow with full aromatics, and with natural smell

Grain : Increases water holding capacity, make stronger for pathogens

Flowers : Supports immune system and obtain more efficiency

Live Stock Manure : Deodorize animal waste, breaks down organic compounds smoothly and shorten decomposing

It can also be applied in solid form by impregnating sepiolite with [samurai GOLD].

Become our business partner for manufacturing and marketing[samurai GOLD]in your country.

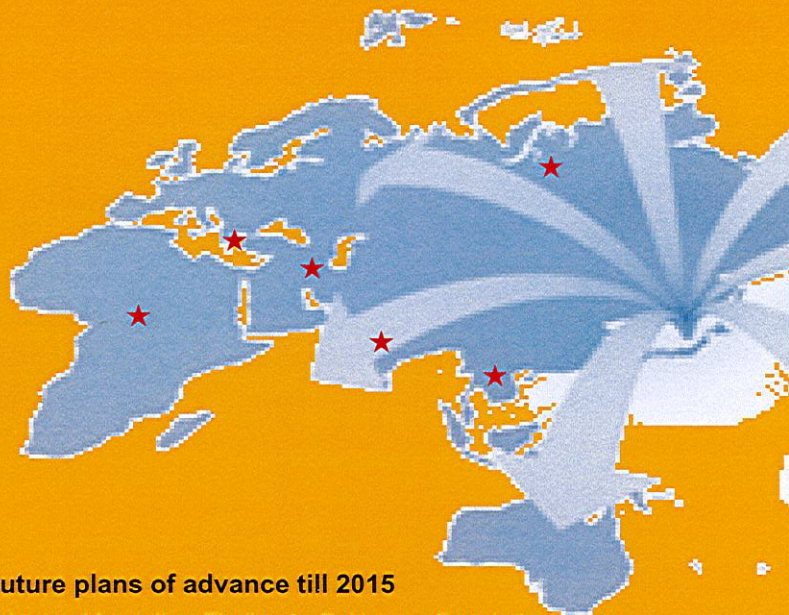

About [samurai GOLD]

[samuraiGOLD]is a photosynthetic bacteria (**Rhodospseudomonas palustris**) based microbial liquid fertilizer developed in Japan.It is effective on suppressing plant failure, promote growth of plant,improve the condition of soil,helps decomposition of organic matter and else.

Advantages of Samurai Gold

- Quiet effective
- Odorless,safe
- Easy to apply
- No expiration date

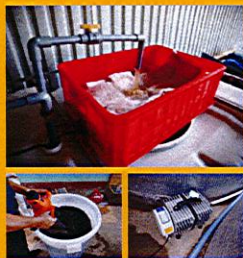

Future plans of advance till 2015

Taiwan · Mongolia · Thailand · Pakistan · Bangladesh · Iran

Seeking also partners around Middle East, Africa and Central Asia

Features of Our Business

Low initial costs

Easy to find equipment to build manufacturing plant

Requires only small amount of space

Possible to produce almost 30 tons of liquid fertilizer in a year , even only it is manufactured in a 1 ton tank

Flexibility on Marketing

Opportunity to produce own brand-OEM manufacturing and overseas sales etc.

The Flow of Business

Negotiations

Negotiating the conditions and capacity of the business.

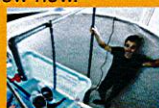

Import of Materials

Import of the materials and manufacturing kit from Japan.

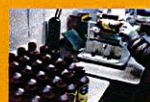

Technical Guidance

A Japanese instructor will stay around 10 days and teach manufacturing know-how.

Manufacture & Marketing

Possible to launch business just after four days of starting manufacturing.

Order of new microbial material

There is no annual quota. Please order to us when you need new material.
